

AI Sales Command Center

A read-only AI memory layer that keeps the CRM aligned with reality.

A section-by-section walkthrough of the AI Sales Command Center. It reads every email thread, meeting note, and the CRM export, and surfaces exactly where the CRM has drifted from what actually happened — without ever editing anything itself. Each section below pairs a short explanation with the corresponding screen. Screenshots below are captured live from the running application.

PURPOSE

Feature overview for reviewers & stakeholders

PROJECT

AtliQ Sales & CRM Assistant — Codebasics AI PM
Bootcamp Capstone

SECTIONS

11 features, in order of the working flow

01 This Week's Attention

A prioritized, paginated list of the leads that need a human look this week. Each card shows an urgency score, potential impact, evidence completeness, and the lead source — followed by the exact mismatch found and a concrete suggested action. Owner filters (All / Bhavin / Dhaval / Jay / Karandeep / Unassigned) narrow the list to one person's pipeline.

02 Mismatch & Suggested Action Callouts

The core of every finding: a plain-language **Mismatch** (what the CRM says vs. what actually happened in emails or notes) paired with a **Suggested action** — always phrased as a draft recommendation, never something the tool does on its own.

100

DataNest (L-1018)

! Urgent

⚡ Potential impact: High

📋 Evidence completeness: 40

📄 Referral

⚠ Mismatches

Mismatch: CRM last contact date is stale and doesn't reflect the recent renewal call and expansion discussion.

Suggested action: Follow up with Sameer Kulkarni to confirm the Kafka engineer profile promised for mid-July and finalize the renewal paperwork ahead of the end-of-September contract expiry.

03 Full Reasoning Trail

Nothing is a black box. Clicking “Evidence completeness — why?” shows exactly what's thin about the evidence (e.g. only one linked document, a missing follow-up date, days since last contact). Expanding “Why did AI recommend this?” lists every individual finding that fed into the score, tagged by category, with the source line quoted underneath.

⚠ Mismatches

Mismatch: CRM last contact date is stale and doesn't reflect the recent renewal call and expansion discussion.

Suggested action: Follow up with Sameer Kulkarni to confirm the Kafka engineer profile promised for mid-July and finalize the renewal paperwork ahead of the end-of-September contract expiry.

Generate follow-up email (draft)

Evidence completeness: 40 — why? ▾

Why did AI recommend this? (7 finding(s))

Summary: 7 finding(s) across Follow-up & open questions, Mismatches, Missing info.

Score breakdown: high-severity mismatch, high-severity mismatch, high-severity mismatch

⚠ Mismatches

Mismatch: CRM last contact date is stale and doesn't reflect the recent renewal call and expansion discussion.

⚠ Mismatches

Mismatch: CRM notes still say '2 engineers placed' with no mention of the renewal or the requested third engineer expansion.

⚠ Mismatches

Mismatch: CRM status 'Won' with no next follow-up date doesn't reflect an active renewal and expansion in progress requiring further action.

📄 Missing info

No next follow-up date is set despite a concrete mid-July commitment to share the third engineer's profile. (missing: next_followup_date)

🔍 Follow-up & open questions

Contract renewal deadline is end of September 2026; client wants it sorted early to avoid a gap. (2026-09 (end of month), renewal to be finalized well before)

🔍 Follow-up & open questions

Third engineer (Kafka) profile expected to be shared by mid-July 2026. (2026-07 (mid-July))

INTERNAL · FOR STAKEHOLDER REVIEW

04 Draft Follow-Up Emails, Ready for Gmail

One click on “Generate follow-up email (draft)” produces a subject line and a context-aware body, referencing the real commitments and dates found in the evidence. It's explicitly labeled “copy manually — nothing is sent automatically,” and “Open in Gmail” hands it off as a normal draft for the rep to review, edit, and send themselves.

The screenshot displays the 'AI Sales Command Center' interface. At the top, it features a header with a brain icon, the title 'AI Sales Command Center', and a description: 'A read-only memory layer under the CRM. It never edits the CRM, emails, or notes, and never sends anything. Loads the CRM, every email thread, and every meeting note — compares them, and shows what's inconsistent, missing, or time-sensitive. Nothing here is auto-applied to the CRM.' To the right, there's a status 'Using ANTHROPIC_API_KEY from .env', a toggle for 'Include leads not in CRM' (checked), and a 'Cache file: analysis_cache.json (exists)' with an 'Ignore cache' option and a 'Refresh' button.

Below the header is a row of buttons for 'All owners' (selected), Bhavin, Dhaval, Jay, Karandeep, and Unassigned. A green status bar indicates 'Analyzed 43/43 leads using gpt-4o in 50.5 seconds (43 from cache, 0 fresh API calls)'.

The main section is titled 'This Week's Attention' and includes a 'Legend' section with a navigation bar for filters 1 through 5 and an 'All' option. The primary lead entry is 'DataNest (L-1018)' with a score of 100. It is marked as 'Urgent', 'Potential impact: High', and has 'Evidence completeness: 40'. A 'Referral' icon is also present. A 'Mismatches' section highlights a 'Mismatch: CRM last contact date is stale and doesn't reflect the recent renewal call and expansion discussion.' A 'Suggested action' follows: 'Follow up with Sameer Kulkarni to confirm the Kafka engineer profile promised for mid-July and finalize the renewal paperwork ahead of the end-of-September contract expiry.'

Below this, there is a 'Generate follow-up email (draft)' button. The resulting email draft has the subject 'Following Up: Kafka Engineer Profile & Renewal Paperwork' and a body that starts with 'Hi Sameer,' and discusses following up on a renewal call, sharing a Kafka engineer profile by mid-July, and finalizing renewal paperwork before the end of September.

At the bottom, there is an 'Open in Gmail' button, a dropdown for 'Evidence completeness: 40 — why?', and a section titled 'Why did AI recommend this? (7 finding(s))'.

05 Categories

Every finding across the pipeline rolls up into six categories — Mismatches, Missing Info, Follow-up & Open Questions, Duplicates, Not in CRM, and Consider Deprioritizing. Clicking a category card filters straight into that finding type, with the same evidence-backed detail view as “This Week's Attention.”

The screenshot displays the 'AI Sales Command Center' interface. At the top, there's a header with a brain icon and the title 'AI Sales Command Center'. Below the title, a descriptive paragraph states: 'A read-only memory layer under the CRM. It never edits the CRM, emails, or notes, and never sends anything. Loads the CRM, every email thread, and every meeting note — compares them, and shows what's inconsistent, missing, or time-sensitive. Nothing here is auto-applied to the CRM.' To the right of the title, there's a status indicator 'Using ANTHROPIC_API_KEY from .env', a toggle for 'Include leads not in CRM' (which is checked), and a 'Cache file: analysis_cache.json (exists)' with an 'Ignore cache' option and a 'Refresh' button.

Below the header, there's a row of buttons for 'All owners' (highlighted in pink), 'Bhavin', 'Dhaval', 'Jay', 'Karandeep', and 'Unassigned'. A green status bar indicates 'Analyzed 43/43 leads using gpt-4o in 50.5 seconds (43 from cache, 0 fresh API calls)'. Below this, a row of metrics is shown: 'Avg. evidence' (44), 'Avg. urgency score' (9.4), 'High Risk leads' (4), 'Hidden Opportunities' (0), and 'Critical leads' (33).

The 'Categories' section follows, showing six cards with icons and counts: 'Mismatches' (25), 'Missing Info' (28), 'Follow-up & open questions' (37), 'Duplicates' (2), 'Not in CRM' (5), and 'Consider deprioritizing' (6). Each card has a corresponding button below it with the same name. Below the categories, it says 'Showing all findings' and a blue button prompts 'Select a category above to browse its top leads.'

On the left side of the interface, there's a vertical sidebar with icons for 'Categories' (highlighted in pink), a target icon, a line graph icon, a magnifying glass icon, and a grid icon.

Showing: Mismatches

GreenGrid Solar (L-1030)

Suggested action: Confirm Pranav has completed the SCADA API feasibility check (due 14 Jul) so Jay can finalize and send the proposal to Aditya by the committed 17 Jul deadline, addressing the CSV-over-email data access issue for the second SCADA vendor.

DataNest (L-1018)

Suggested action: Follow up with Sameer Kulkarni to confirm the Kafka engineer profile promised for mid-July and finalize the renewal paperwork ahead of the end-of-September contract expiry.

Kaveri Textiles (L-1007)

Suggested action: Since Subbu asked for a revised 2-plant scope quote by 15 July and it hasn't been started yet (per ground truth as of 2026-07-10), Jay should prioritize preparing and sending that quote before the deadline, factoring in the Tally + legacy Access DB extraction complexity Senthil flagged.

ATLIQ · AI SALES COMMAND CENTER — FEATURE GUIDE

INTERNAL · FOR STAKEHOLDER REVIEW

06 Effort vs. Payoff ZERO AI CALLS

Every open lead plotted by deal value against days since last contact — pure CRM math, no LLM involved, so this view costs nothing to load. Four quadrants at a glance: Worth the push, Prioritize, Quick wins, Consider letting go — with a companion table view for sorting the same data row by row.

07 Hidden Opportunities

Surfaces deals with strong underlying signals that aren't otherwise top-ranked — the kind of lead that could quietly slip through the cracks. When there's nothing live to show, the section displays a clearly-labeled EXAMPLE card instead of going blank, so it's obvious what the feature looks like without ever being mistaken for real data.

08 Drill Into a Lead

The deepest view in the tool. Pick any company or lead to see its full CRM record, then a complete Opportunity Timeline — every email and meeting note mapped chronologically against the CRM's current status, each with a “Show evidence” expander. It ends in a Suggested CRM update (explicitly “not applied automatically”) and a Suggested action, both stated as recommendations for a human to review.

NOTES

big one. compliance review ongoing on their side

Opportunity Timeline

Email — 26th March — Email Thread: FinEdge Bank — compliance review — CRM shows last contact 2026-03-30 and status 'Proposal Sent', but compliance actually cleared on 19 Jun and client requested a commercial call - no update since.

Show evidence (4)

Mismatch: CRM shows last contact 2026-03-30 and status 'Proposal Sent', but compliance actually cleared on 19 Jun and client requested a commercial call - no update since.

CRM says: Last contact date (per CRM): 2026-03-30; CRM status: Proposal Sent

"Bhavin — good news, compliance has cleared AtliQ. We can move to the commercial discussion now. My assistant will find a slot the week of 29 June — please confirm your availability."

Source: 2026-03-26_finedge_compliance_docs.md

Mismatch: CRM record shows no activity/next steps reflecting the actual state - internal team confirms nobody has followed up despite this being the biggest deal.

CRM says: Next follow-up date (per CRM): (blank)

"The 95k deal — L-1023, largest in the pipeline — has had no AtliQ activity since March. CRM last_contact_date still shows 2026-03-30."

Source: 2026-03-26_finedge_compliance_docs.md

Timing: Client asked to schedule a commercial call the week of June 29, which never got confirmed - now over three weeks overdue. (week of 2026-06-29 (now overdue))

"My assistant will find a slot the week of 29 June — please confirm your availability."

Source: 2026-03-26_finedge_compliance_docs.md

Dropped commitment: Client asked to confirm availability for a commercial discussion the week of 29 June, and this was never confirmed by AtliQ.

"please confirm your availability. This is our largest data initiative this year, so let's not lose momentum."

Source: 2026-03-26_finedge_compliance_docs.md

Email — 27th June — Email Thread: Harbor & Finch Advisory — referral introduction

Meeting note — 7th July — Internal — which deals first? (7 Jul, ad-hoc) — Internal meeting flagged this deal as sitting idle for three weeks since compliance cleared, with Bhavin acknowledging it's the biggest deal. (2026-07 (immediate))

Show evidence (1)

TODAY — Current status: Proposal Sent

Suggested CRM update: Update CRM status/last_contact and set next_followup_date; note compliance cleared 2026-06-19 and commercial call still needs scheduling. (not applied automatically)

Suggested action (draft only — nothing is sent automatically): Reach out to Suresh Menon to confirm a commercial discussion slot, referencing his 19 Jun email noting compliance cleared and his request for the week of 29 June, since this 95k deal (the largest in pipeline) has had no AtliQ response in three weeks.

Generate follow-up email (draft)

Linked documents

Email — 26th March (2026-03-26_finedge_compliance_docs.md)

09 Generate Follow-Up Email & Linked Documents

Directly from a lead's detail view, the same one-click "Generate follow-up email (draft)" is available — and every source document behind the findings (the specific email or meeting note file) is listed under Linked documents, so any claim can be traced back to its original file.

[illegible]

10 Since Your Last Check & Executive Summary

“Since your last check” compares this analysis run against the previous one — new issues, resolved issues, and persisting issues, with a “top 5 by how long they've lingered” breakdown. Just below it, the Executive Summary is a short, AI-written narrative of the whole pipeline's health: totals, the most urgent leads by name, and which owner's pipeline needs the most attention right now.

11 The Floating Assistant

Two lightweight tools sit in the bottom-right corner of every page, built for founders and sales execs who need answers fast. The **hourglass** generates a personalized ~30-minute action plan for whichever owner is selected — a short, prioritized list of the specific replies and follow-ups that owner should knock out next. The **Dashboard Assistant** is explicitly not a chatbot for the CRM itself — it answers questions about the dashboard: the logic behind scores like Effort vs. Payoff or the Urgency Score, and quick insights such as which leads have unanswered open questions, via prompted questions or free text.

AtliQ AI Sales Command Center is a **read-only memory layer** under the CRM. It never edits the CRM, emails, or notes, and never sends anything automatically — every suggestion shown in this guide is a draft for a human to review.
